

GREENHOUSE GAS AND ENERGY

Anglo American is committed to continuous improvement in energy efficiency and a reduction in greenhouse gas (GHG) emissions.

In 2011, we established energy and GHG emissions performance targets across operations to drive this improvement.

Initiatives identified have led to the following reduction targets, by 2015:

- 7% minimum reduction in overall energy consumption
- 40% minimum reduction in overall GHG emissions

To achieve our performance targets we have implemented an energy and carbon management program called ECO₂MAN. The ECO₂MAN program identifies where energy is being used and we pinpoint the best opportunities for improving our practices. Successful implementation of this program has delivered the following outcomes:

- Electing energy managers and champions at each site to drive awareness of energy consumption and encourage improved processes.
- Introducing electricity metering to identify equipment consuming the largest amounts of energy.
- Establishing a fuel monitoring system at our sites to better monitor and record fuel usage.

An overview of Moranbah North Power Station located at our Moranbah North mine in the Bowen Basin.

METHANE CAPTURE

Anglo American's Moranbah North and Capcoal underground operations provide coal mine waste gas to two power stations owned and operated by Energy Developments Limited. After coal mine waste gas is burnt, methane, one of the cleanest fossil fuels, is a resultant by-product which produces less carbon dioxide for each unit of

heat than other hydrocarbon fuels. By capturing methane which would otherwise have been vented as a waste product, these power stations generate 75 MW of electricity and prevent 2.5 million tonnes of CO₂-equivalent emissions annually. This electricity alone can power 48,000 homes, with emission savings equivalent to taking 500,000 cars off the road.

Anglo American is committed to the highest standards of environmental performance. Our aim is to minimise environmental harm in exploration, construction, operation and closure of our mines in an environmentally responsible and sustainable way.
